Introduction

This report documents the planning, design, and development of my personal portfolio website created as the final assessment for the Internet Technologies course at The British College. The website showcases my web development skills and projects using HTML5, CSS3, and JavaScript.

The website follows a Japanese samurai theme reflecting my philosophy that discipline, precision, and mastery guide my approach to coding, just as a samurai dedicates their life to mastering the blade.

Site Overview

Purpose & Goals

The website serves as a personal portfolio to:

- Showcase web development projects and skills
- Provide contact information employers or collaborators
- Display a gallery of project screenshots
- Present a resume and skills breakdown
- Responsive design implemented using media queries, Flexbox, and Grid to ensure compatibility across devices.

Pages & Structure

The site consists of 7 pages as shown in the table below:

- Home Page (Landing page with hero banner, about preview, featured projects)
- About Page (quick facts table, interests section)
- Skills Page (Skill progress bars, skills breakdown table, toolbox)
- Projects Page (Full list of all projects with descriptions technologies used tags)
- Gallery Page (Photo gallery with 10 project screenshot thumbnails)
- Resume Page (Experience timeline)
- Contact Page (Contact form (JS validated), contact info, FAQ section)

Navigation

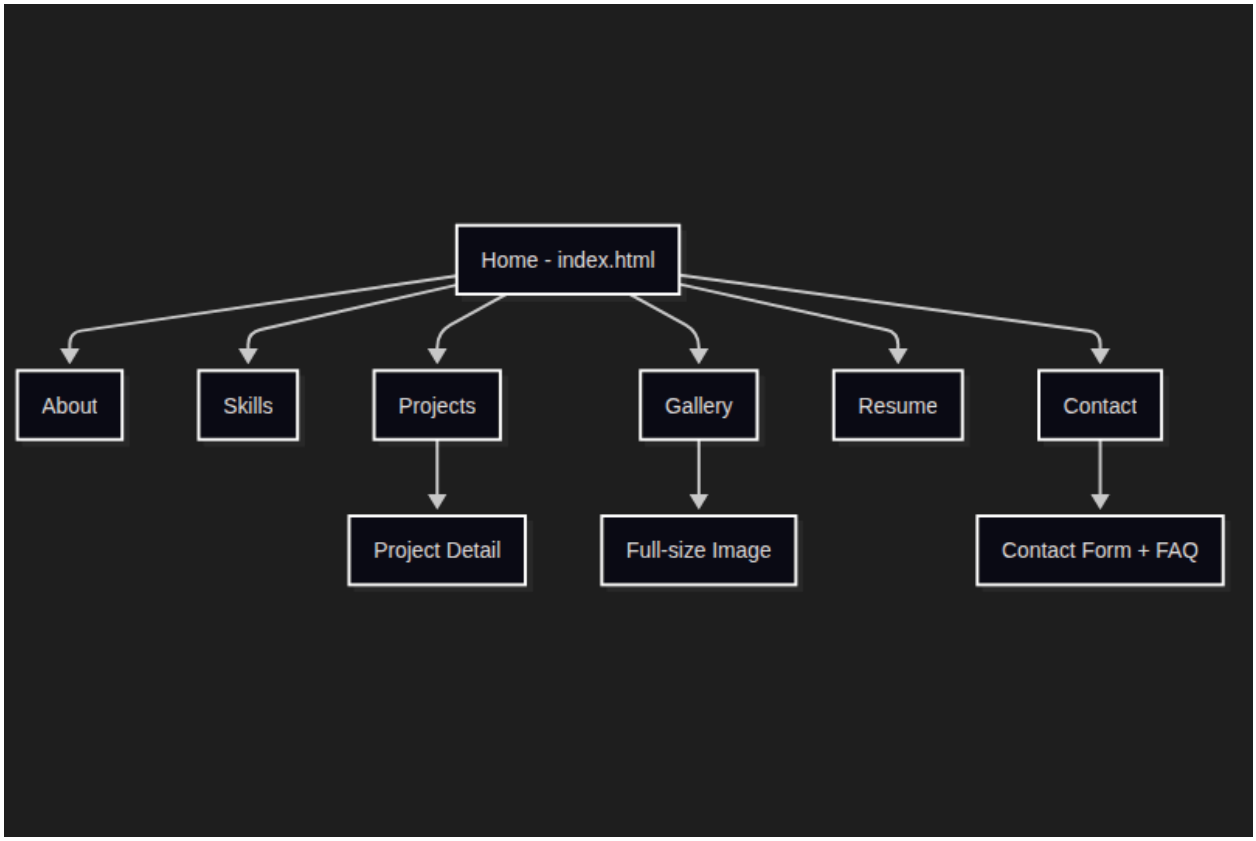
Every page includes an identical navigation bar at the top containing links to all 7 pages, ensuring users can reach any page from any page. The current active page is highlighted.

Pages with multiple sections include local navigation to help users jump directly to specific content such as all pages except the homepage includes breadcrumb.

The footer of every page includes a secondary text-only navigation row listing all pages separated by | pipes. This provides an alternative navigation method at the bottom of long pages without requiring the user to scroll back to the top.

Site Map

The site map demonstrates the hierarchical structure of the website and how all seven pages are interconnected, ensuring easy navigation between sections.



Wireframe

Each wireframe demonstrates the layout and content structure of the page. All wireframes use:

- Gray/black/white color scheme only (no design colors)
- Placeholder boxes instead of real images
- Lorem ipsum or generic placeholder text
- Labeled sections to show what each element represents

MY STORY
Who is Author ?
lorem is simply dummy text of the printing and typesetting industry. Lorem Ipsum has been the industry's standard dummy text ever since the 1500s, when an unknown printer took a galley of type and scrambled it to make a type specimen book. It has survived not only five centuries, but also the leap into electronic typesetting, remaining essentially
My journey into technology began when I built my first simple webpage and realised I
There are many variations of passages of Lorem Ipsum available, but the majority have could create anything I could imagine. That spark of creativity has driven me ever since.
suffered alteration in some form, by injected humour, or randomised words which don't look even slightly believable. If you are going to use a passage of Lorem Ipsum, you need to be sure there isn't anything embarrassing hidden in the middle of text.

Designed & Built by Adarsha Karki

Typography

The site uses clean, readable fonts with appropriate sizing throughout. Body text is left-aligned for readability. Column widths are controlled to prevent overly long line lengths. Font sizes are large enough to be readable at standard screen distances.

Consistency

- Design consistency is maintained across all pages through:
- Identical navigation bar on every page
- Identical footer on every page with same information and secondary nav
- Same color scheme applied throughout
- Same card style used for projects, interests, tools, and FAQ sections
- Same breadcrumb pattern on all inner pages
- Maximum page width of 1320px enforced via CSS

JavaScript Features:

JavaScript is used for the following functionality:

- Contact form validation (checks required fields, validates email format, displays error messages and success message)
- Image slider/carousel on homepage hero banner (auto-slide with manual controls and navigation dots)
- Skill bar animation (uses Intersection Observer to animate progress bars on scroll)
- Reusable navigation using Fetch API (dynamically loads header and footer across all pages)
- Active navigation highlighting (detects current page and highlights active menu link)

HTML Tables

Tables are used in two places on the site to demonstrate colspan, rowspan, and nested table skills:

- about.html (Quick Facts table with personal details)
- skills.html (Skills breakdown table using rowspan to group technologies by category)

Usability

Usability Factor	How It Is Addressed
Readability (Font Size)	Minimum 16px body text used throughout, headings scale up appropriately
Readability (Column Width)	Max page width 1320px, content columns kept under 800px for comfortable reading
Contrast	Dark text on light backgrounds and light text on dark backgrounds throughout
Web Friendly Text	Content written in short paragraphs, scannable headings, bullet points where appropriate
Load Time	Images optimized, no heavy libraries loaded unnecessarily, minimal external dependencies
User Orientation	Breadcrumbs show current location, active nav link highlighted, page headings on every page
Navigation Ease	Users can reach any page from any page in one click via persistent nav bar

GitHub Repository

Repository Name: itassessement2026
GitHub Username: Ads4331X
Repository URL: https://github.com/Ads4331X/itassessement2026
Visibility: Public
Minimum Commits: 5+ commits made throughout development

Conclusion

This portfolio website successfully meets all requirements of the final assessment. It demonstrates knowledge of HTML5 structure, CSS3 styling and layout, JavaScript interactivity and validation, responsive design principles, and web usability best practices.

The samurai theme gives the site a distinctive and memorable identity while maintaining professional standards. Every line of code was written with the samurai philosophy in mind — discipline, precision, and attention to detail.

The project has been submitted to GitHub as itassessement2026 with a public repository and a minimum of 5 commits as required.
